

The Best of Both Worlds For Stronger, Healthier Corn from the Roots Up

ADVANCE LCO combines the nutritional advantages of Advance Concentrate with the power of LCO Promoter Technology®

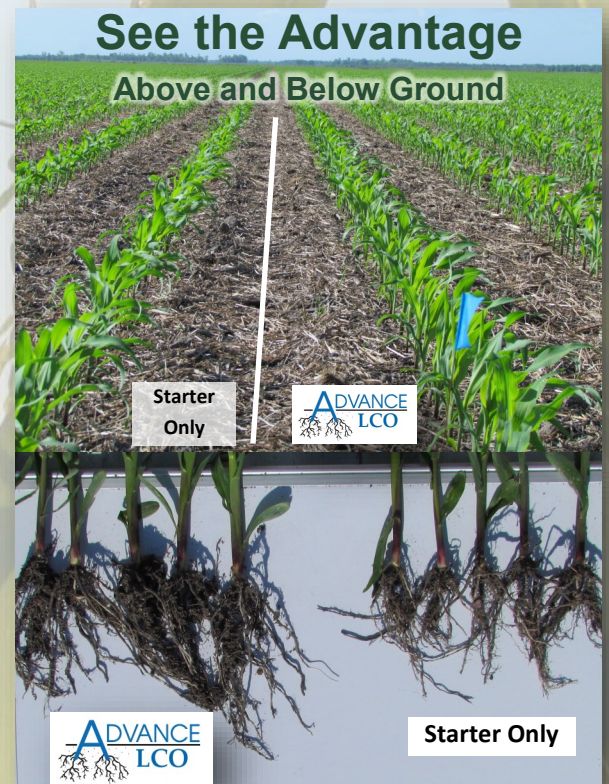

ADVANCE LCO is a crop enhancement treatment containing LCO Promoter Technology® for corn and a proprietary composition of natural carboxylic acids secreted by soil bacteria, fungi, and plant roots to enhance the solubility and uptake of plant nutrients.

ADVANCE LCO enhances root development and early growth and also solubilizes nutrients making them more available to plants. Advance LCO is a natural material mimicking the way nature solubilizes nutrients for absorption and uptake. The combination leads to improved plant health, better utilization of nutrients and higher yielding plants from the roots up.

ADVANCE LCO ... A Winning Combination for Your Corn

ADVANTAGES

- Easy, flexible application
- Can be mixed with starter or nutrient solutions
- Enhanced root and shoot development for improved nutrient and water uptake
- Solubilizes nutrients making P, K, Ca, Mg, Mn, Mo, Fe, and S more available to plants
- Improved plant health enables plants to better handle environmental pressures
- Natural material mimicking the way nature solubilizes nutrients for absorption and uptake
- Advance LCO contains mono-, di-, and polycarboxylates which have multiple active sites to bind with and solubilize nutrients
- Advance can bind with most nutrients in the soil making them available to the plant
- Contains LCO Promoter Technology® and no complexed metals
- Typical yield increases of 7 to 8 bu/acre in corn
- Increased yield at harvest means better ROI
